

In order to investigate behavioural problems in children in different settings, with a focus on lachesis child

Dr. Arun Yashwant Patil

Abstract-

With a focus on the Lachesis kid, research on child behavior patterns under different settings While researching this issue extensively, I read several well-respected works on homoeopathy, miasm, psychology, medicine, and homoeopathic therapies. Journals and online browsers were very helpful to me. Approach: I chose 30 examples for statistical analysis after doing a practical study of the issue at the college OPD and hospital. The results show that out of 30 patients, 18 were male and 12 were female. Regarding miasms, the number of Psoric instances was 2. There were 12 psoro-sycotic cases, 14 syphilitic patients, and 2 instances that covered all the miasm. Fifteen instances had attention deficit hyperactivity disorder, eleven involved oppositional defiant disorder, and fourteen involved conduct disorder. There have been 28 successful instances and 2 patients who stopped using the medication. This resulted in a 93% success rate. Ultimately, homoeopathic treatment Lachesis has shown promise in the treatment of a range of pediatric behavioral problems.

Key word: Behaviour, Psychology, Homoeopathy, Miasm.

Introduction-

Problems with emotions, physical functioning, behavior, or performance are all possible symptoms of a child's mental illness. Problems may manifest in one or more of these areas. Mental health issues birth abnormalities, physical injuries, inconsistent and contradictory child-rearing techniques, marital strife, child abuse and neglect, excessive eating, chronic disease, and so on are all examples of the kinds of physical and mental pressures that might lead to this. However, certain agents do not result in certain illnesses or symptoms, instead An individual's temperament, developmental stage, the kind and length of stress, the child's

prior experiences, and the family's capacity for coping and adaptation are among the many factors that contribute to the emergence of psychological issues in children. It is much more challenging for children and their families to cope with chronic stress or a string of stressful events than it is with a single, severe incident of stress. Depending on the child, they may have an instant response to traumatic experiences or suppress their feelings until later, when they are more susceptible, they respond in an unhealthy way. Conducting professions are characterized by frequent behavioral changes.

Professor

Homoeopathic Medical College & Hospital, Jalgaon

Patients with insomnia may find themselves waking up in the middle of the night, confused and bewildered. At some point, the sleep-wake cycle may become completely disordered, and nighttime motor activity may rise. Resistance to assistance with personal care is a typical manifestation of the frequent verbal and physical aggression. Incidents of severe physical aggression against other people are uncommon. There is a wide range of intentionality in the rise and fall of activity levels. The term "wondering" may describe a wide range of activities, although patients may endanger themselves if they go into dangerous areas. Lachesis homeopathy makes use of a remedy that originates from the venom of the bushmaster snake, which is native to South America. Its very toxic venom may damage red blood cells and make blood clotting more difficult. The venom is diluted with large quantities of milk sugar or lactose and then used in lachesis homeopathy.

Aim & Objective- To show the efficacy of using Lachesis in behavioral disorder of the children.

Results- In this study we have analyzed the data of 30 patients where male: female is 18: 12.

Sex	Number
Male	18
Female	12

Table No. 1 – Sex Distribution

As per as miasm are concerned Psoric cases were 2. Psoro –Sycotic cases are 12, Psora-syphilitic cases are 14 and 2 cases covered all the miasm.

Miasm	Number
Psoric	2
Psoro –Sycotic	12
Psora-syphilitic	14
All Miasm	2

Table No. 2 – Miasm

Distribution Oppositional defiant disorder cases were 11, Conduct disorder cases were 14 and Attention deficit hyperactive disorder cases were 5.

Disorder	Number
Oppositional defiant	11
Conduct disorder	14
ADHD	5

Table No. 3- Different behavioral disorder 28 cases have shown favorable result and 02 patients discontinued the treatment. Hence the success rate was 93%.

Case Report

Name - M. V S. C. **Age** - 10 yrs.

Sex – Male **Religion**- Muslim.

Occupation: Student. **Date :** 14 / 01 / 18

History of patient: Chief complaints sneezings since 2yrs

History of Present Complaints:

- 1) Sneezing since 2 yrs onset gradual agg morning dust , closed room. watering of nose .
- 2) Coryza since 2 yrs: Watery yellowish discharge > morning, dust. >open air. Associated with blockage of nose

Past History: Not particular

Family History: Not particular.

Drug History: Taken allopathic t/t with temporary relief.

Personal History:

Hobbies:

Reading

Living environment:

Hygienic. **Vaccination:-**

completed **Marital Status:**

Unmarried

Homoeopathic**Generalities:Diet:**

mixed **Appetite:**

Good.

Desire: Cold drink,
Indigestible things

Aversion: Sweet, eggs

Thirst: Thirstless

Dream: Of falling from height

Urine: Clear

Sweat: Scanty offensive.

Stool: Regular.

Sleep: Excess sleep

Thermals: Hot patient

Physical Makeup: Lean, thin.

Mental Generals: (Life Space): He is from middle family. He is very obstinate and wants' to do things in its own way. Does not like & bear contradiction. Becomes very angry when anyone contradicts him. Then in anger he throws things & beats younger sister. Does not like to be disturbed by anyone. Confidence want of and does not want to meet new people. He is of fearful in nature. He is very bashful in nature. Not having eye to eye contact.

Examination of Patient:**General:**

Build: Lean
thin.

Nutrition:
Good

Tongue:

Dry, clean

Temp.:

Afebrile.

Pulse:

68/min

Systemic Examination:

CVS, GIT, CNS, RS- Normal

Lymph Gland- Normal

Provisional Diagnosis: Oppositional defiant disorder.

Miasmatic Diagnosis: Psora - sycosis

Repertorial Totality:

1. Obstinate, headstrong - Mind
2. Timidity – Mind
3. Anxiety: Morning - Mind
4. Dullness, sluggishness, difficulty of thinking and comprehending – Mind
5. Food and drinks: Indigestible things
Desires- Generalities
6. Sleepiness: Sleep

Prescription:

On 14 / 01 / 18

Lachesis 1M,/

1 dose, SL 2

Pills B.D./7

days

Follow up:

Date	Symptoms	Prescription	Observations
07/02/18			Feeling very worse, coryza increased discharge. Sneezing increased. Irritability Anger also increased.
21/01/18	Sneezing reduced coryza reduced. Appetite is better. Stool clear, urine clear.	SL 2 Pills B.D./7 days	Feels good. Behaves well. Coryza decreased is thin watery discharge. Sleep sound
29/01/18	Sneezing much better coryza also decreased appetite good obstinacy decreased. Anger decreased. Dreams not seen.	SL 2 Pills B.D./15 days	dreams decreased
25/02/18			Feeling good now. Behaves in good manner of coryza & sneezing relived. Dreams not

Conclusion

1. Constitutional medicine Lachesis was given greater weight throughout the investigation.
 2. When issues inside the family are the root cause of a behavioral disorder, it is essentially a case of not adjusting well to the ever-changing dynamics within the family. Because of his inflated sense of self-importance or his dissatisfaction with his home life, the youngster either cannot or does not want to adapt. Medicine boosts his vigor and alleviates his internal pain, allowing him to get more insight, yet homoeopathy cannot alter his circumstances or his surroundings. He is able to adapt to the current situation when his thoughts clear and he sees challenges from a different angle. He becomes so energised that he is prepared to battle his circumstances, regardless of his ability to alter them. It transpired to Based on my observations, when a child's disorder is a result of traumatic experiences, he or she may experience a decline in self-confidence, a loss of hope that things will get better, and excessive worry about the future, without the motivation or ability to take action. While the medication does not undo the effects of their horrific

experiences, it does alleviate his anxiety and give him clarity. Investigating things he was previously scared to undertake is now part of his routine. His energy levels rise, which gives him faith in himself again, and he begins to tackle his issues independently. The goal of homoeopathy is to help people reintegrate into society by reducing negative psychological regressions, blocks, and isolation. By reducing the denial of unpleasant injuries and memories, homoeopathic treatments and approaches to the patient make it easier to bring them to the surface.

A strong personality, self-assurance, and expanded understanding are the inevitable results of this. Lessening of associated physical or psychosomatic symptoms, together with a significant release of energy, well-being, and desire, results from being able to bear mixed emotions and unpleasant memories, which were before considered impossible. A more mature and understanding version of the wounded part of one's personality gradually comes to the surface in the right treatment, allowing for the healing of old wounds and resentments.

3. In summary
4. Finally, it's safe to say that: 1. When used in accordance with homoeopathic principles, homoeopathy plays a fantastic role in the treatment of instances with behavioral problems.
5. 2. Lachesis is a medication that greatly aids in the improvement of the patient's clinical state.
